AB Antagonists of the corticotropin-releasing factor (CRF) neuropeptide should prove to be effective in treating stress and anxiety-related disorders. In an effort to identify antagonists with improved physicochem. properties, new tricyclic CRF1 antagonists were designed, synthesized, and tested for biol. activity. As a result of studies aimed at establishing a relationship between structure and CRF1 binding affinity, NBI 35965 [i.e., (7S)-6-(cyclopropylmethyl)-2-(2,4-dichlorophenyl)-7-ethyl-7,8-dihydro-4-methyl-6H-1,3,6,8a-tetraazaacenaphthylene (I)] was identified as a high-affinity antagonist with a pKi value of 8.5. I proved to be a functional CRF1 antagonist with pIC50 values of 7.1 and 6.9 in the in vitro CRF-stimulated cAMP accumulation and ACTH production assays, resp., and I also reduced CRF or stress induced ACTH production in vivo.

I

AB It has been shown that 3-phenylpyrazolo[1,5-a]pyrimidines were potent antagonists of the human corticotropin-releasing factor-1 receptor. A series of 3-pyridylpyrazolo[1,5-a]pyrimidines, e.g., I, containing a weakly basic pyridine ring at the 3-position of the bicyclic nucleus was designed to reduce lipophilicity from the initial lead compound. These

3-pyridyl compds. exhibited potent antagonists at the human CRF1 receptor. Moreover, the hydrophilic and weakly basic pyridine moiety increased the water solubility of some analogs. I exhibited good binding affinity at the human CRF1 receptor with a  $K_i$  value of 3.5 nM. As a functional antagonist, it dose-dependently inhibited CRF-stimulated cAMP production in cells expressing the CRF1 receptor ( $IC_{50}$  = 50 nM), and CRF-stimulated ACTH release from cultured rat pituitary cells ( $IC_{50}$  = 20 nM). I had a log P value of 4.9 and water solubility of greater than 10 mg/mL. Pharmacokinetic studies in rats showed that I was orally bioavailable and able to penetrate into the brain. I has been demonstrated in vivo efficacy in animal behavioral models that measure anxiolytic activity. These results suggest that analogs from this series were potent CRF1 receptor antagonists with proper physicochem. properties and good pharmacokinetic profiles. I was developed into a clin. compound and exhibited efficacy in patients with major depression.
